PROFILE

AI/ML engineer with an MSc (Merit) in Applied AI and a first-author Springer publication, focused on production LLM systems. I build retrieval-augmented pipelines pairing vector search with knowledge graphs to keep answers grounded and citable, raising context precision to 0.84 while eliminating hallucinations and take work from retrieval design through backend APIs to deployment, including a voice-agent backend whose call latency I cut 54%.

TECHNICAL SKILLS

Machine Learning, NLP & LLMs : PyTorch, TensorFlow, scikit-learn, XGBoost, LightGBM, Retrieval-Augmented Generation (RAG), Sentence Transformers, vector embeddings, semantic search, cross-encoder re-ranking, RAGAS evaluation, Ollama

Engineering & Data : Python, TypeScript, JavaScript, C++, SQL, FastAPI, Flask, REST APIs, React, PostgreSQL, Neo4j, pandas, NumPy

MLOps, Cloud & DevOps : MLflow, Docker, Git, GitHub Actions (CI/CD), AWS, GCP (Basic), Linux

EXPERIENCE

Outlyst

Oct 2025 - Mar 2026

AI / Machine Learning Engineer (fixed-term contract)

Leeds, UK (Remote)

- Built and deployed an AI voice-agent system for outbound calling (Retell AI, FastAPI): backend dialogue-flow logic, automated call flows and lead-qualification rules, handling 2,100+ calls and cutting manual calling workload by roughly 50%.
- Reduced average call latency 54%, from 2.4s to 1.1s, through async callbacks, connection pooling and backend optimisation, materially improving conversational responsiveness.
- Built an internal micro-CRM for lead tracking, removing external CRM licensing costs.

University of Bradford

Jan 2025 - Sep 2025

Research Assistant, Machine Learning & LLMs

Bradford, UK

- Built **FinLaw-UK** (code + benchmark), a RAG system pairing Mistral 7B (served locally via Ollama) with a Neo4j knowledge graph for UK financial-regulation QA, grounded in FCA, PRA, FRC and statutory sources.
- Engineered the retrieval pipeline: clause-level segmentation, Sentence Transformer embeddings, cross-encoder re-ranking, and Neo4j citation checks flagging missing references as hallucinations.
- Evaluated the pipeline against a custom 110-item benchmark using RAGAS; proved cross-encoder re-ranking improved context precision to 0.84 and implemented a refusal gate to eliminate regulatory hallucinations.

COMSATS University Islamabad

Jul 2023 - Jul 2024

Research Assistant, Data Science

Islamabad, Pakistan

- Benchmarked 11 classifiers for diabetes risk on a 253,680-record CDC BRFSS dataset (14% positive class), comparing random over-sampling, SMOTE and ADASYN with resampling confined to training folds; Random Forest performed best on ROC-AUC and sensitivity. Deployed the resulting risk-screening model as a public web app using React and Flask: [DiabetesSense](#).

PROJECTS

Jobzyl: Multi-Platform Job Aggregator

[jobzyl.com](#)

- Live platform fanning one query out to 20 job-board APIs across 60+ countries in parallel, deduplicating server-side and streaming results over Server-Sent Events (first results ~1.4s).
- Built an ATS-style CV matcher (browser-side keyword extraction and overlap scoring), Kanban application tracker and CSV/JSON export; React and TypeScript, CV text encrypted at rest.

EDUCATION

University of Bradford

Sep 2024 - Sep 2025

MSc, Applied Artificial Intelligence and Data Analytics (Merit)

Bradford, UK

- **Dissertation**: FinLaw-UK: A Graph-Augmented Retrieval Chatbot for Reliable and Transparent UK Financial Regulation.

COMSATS University Islamabad

Sep 2020 - Jul 2024

BS, Bioinformatics

Islamabad, Pakistan
